

60C2

100 RM

60C2CV™

CONV

60C2 is a strong performer from East to West in various yield environments. Fast dry down will allow for an early, timely harvest. Best performance for this semi-flex ear with good kernel depth has been shown at medium to medium-high populations. This product works best when kept in zone.

- High-end yield performance on productive soils
- Strong overall disease package
- Best performance at moderate populations
- Quick dry down for early harvest
- Moderate tolerance to Goss's Wilt
- Strong NCLB and eyespot protection

POSITIONING AND MANAGEMENT

2530	M-H	Semi-Flex	R
GDUs to Black Layer	Pop. Range	Ear Type	Cob Color
16-18	R	HR	HR
Kernel Rows	Corn-on-Corn	Conventional Tillage	No-Till
R	HR	HR	HR
Timber Soil	Poorly Drained Soil	Sandy Soil	Early Planting Date
NR	R	HR	HR
Delayed Harvest	Response to Fungicide	Corn-on-Soybean	Late Planting Date
30-34	1275	M-T	M
Recommended Population	GDUs to Mid-Silk	Plant Height	Ear Height
M	Herbicide Tolerance		
Canopy Type			

RATINGS KEY: 9 = OUTSTANDING 1 = POOR

- 9 Best-in-class performance in a given situation or growing environment
- 7-8 Good to very good adaptability to a given situation or growing environment
- 5-6 Average to slightly above average adaptability to a given situation or growing environment
- 1-4 Avoid using a product in a given situation or growing environment
- NA Rating not available

PLANT AND EAR HEIGHT:

- T = Tall
- M = Medium
- S = Short
- H = High
- L = Low

- HIGH-YIELD
- CORN-ON-CORN
- HEAT/DROUGHT-STRESSED
- POORLY DRAINED

COB COLOR: R = Red, P = Pink, W = White

Area of adaptation map: Consult with a NuTech representative for planting outside of AOA recommendation. NuTech AOA maps are based on EPA III ecoregions. U.S. Environmental Protection Agency, 2013, Level III ecoregions of the continental United States: Corvallis, Oregon, U.S. EPA – National Health and Environmental Effects Research Laboratory, map scale 1:7,500,000, <https://www.epa.gov/eco-research/level-iii-and-iv-ecoregions-continental-united-states>.

Important: Characteristic scores provide key information useful in selecting and managing products in your area. Information and scores are assigned by NuTech Seed and are based on period-of-years testing through 2017 harvest and were the latest available at time of printing. Some scores may change after 2018 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results.

Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision. Seed products with the LibertyLink® (LL) trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yield genetics with the powerful, non-selective, post emergent weed control of Liberty® herbicide for optimum yield and excellent weed control. Liberty is not registered for use in all states. Always follow grain marketing, stewardship practices and pesticide label directions. Roundup Ready® crops contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® brand agricultural herbicides. Roundup® brand agricultural herbicides will kill crops that are not tolerant

to glyphosate. Individual results may vary, and performance may vary from location to location and from year to year. This result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible. Product performance in water-limited environments is variable and depends on many factors such as the severity and timing of moisture deficiency, heat stress, soil type, management practices and environmental stress as well as disease and pest pressures. All hybrids may exhibit reduced yield under water and heat stress. Individual results may vary. Herculex® I Insect Protection, Herculex® XTRA Insect Protection and Herculex® RW Rootworm Protection, technology by Dow AgroSciences and Pioneer Hi-Bred. AMX - Optimum® AcreMax® Xtra Insect Protection system with YGCB, HXX, LL, RR2. Contains a single-bag integrated refuge solution for above- and below-ground insects. In EPA-designated cotton growing counties, a 20% separate corn borer refuge must be planted with Optimum AcreMax Xtra products.
